

# Seremban 2 invaded by crows

I HAVE been a resident of Seremban 2 for the last 10 years. When I first moved in, there wasn't any crow in sight, but today large flocks are to be seen all over.

I am surprised the authorities have not taken any action and have allowed the crow population to grow. Crows have no natural predators and they breed very quickly.

I do believe we are all aware what happens when the population gets too large. If this situation goes unheeded then we will not be able to walk or park our cars under any trees, overhead cables, and etc, unless we want to be blessed with crow poop on our heads.

Please act before it's too late!

**A CONCERNED RESIDENT,  
Seremban.**
